

HIT-HY 10 injection mortar

Anchor design (ETAG 001) / Rods and Sleeves / Concrete

Injection mortar system

Hilti HIT-HY 10
330 ml foil pack
(also available as
500 ml foil pack)

Benefits

- Chemical injection fastening
- Two component hybrid mortar
- Rapid curing
- Suitable for overhead fastenings
- Versatile and convenient handling
- Clean and simple in use
- Small edge distance and anchor spacing
- Always correct mixing ratio

Threaded rods:
HIT-V
HIT-V-R
HAS-(E)
HAS-(E)R

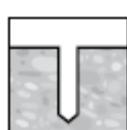

Internal threaded sleeve:
HIS-N
HIS-RN

Base material

Concrete
(non-cracked)

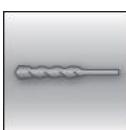

Dry concrete

Load conditions

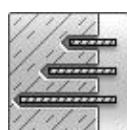

Static/
quasi-static

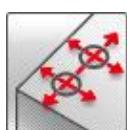

Installation conditions

Hammer
drilling

Variable

Corrosion
resistance

Static and quasi-static loading (for a single anchor)

All data in this section applies to

- Non-cracked concrete C20/25, $f_{ck,cube} = 25 \text{ N/mm}^2$
- Load values valid for holes drilled with TE rotary hammers in hammering mode.
- Diamond coring is not permitted.
- Embedment depth, base material and thickness given in table
- Correct anchor setting (see instruction for use, setting details)
- No edge distance and spacing influence
- Base material temperature during installation and curing must be between 0°C through +40°C
- In-service temperature range:
(min. base material temperature -40°C, max. long term/short term base material temperature: +24°C/40°C)

Recommended loads for tension loading: non-cracked concrete C 20/25^{a)}

Threaded rods - size	M8	M10	M12	M16
Drill bit diameter d_0 [mm]	10	12	14	18
Embedment depth h_{ref} [mm]	80	90	110	125
Base material thickness h [mm]	110	130	150	196
Tensile load N_{rec} [mm]	5,0	7,0	10,0	12,0

a) The data provided table is intended for product comparison only and not suitable for the complete design of an anchorage

Rebar - size	Ø8	Ø10	Ø12	Ø13	Ø14	Ø16
Drill bit diameter d_0 [mm]	12	14	16	18	18	20
Embedment depth h_{ref} [mm]	80	90	110	125	125	145
Base material thickness h [mm]	130	150	170	180	190	210
Tensile load N_{rec} [mm]	5,0	7,0	10,0	11,0	11,5	12,0

a) The data provided table is intended for product comparison only and not suitable for the complete design of an anchorage

Setting information

Installation temperature range:
0°C to +40°C

In service temperature range

Hilti HIT-HY 10 injection mortar with anchor rods may be applied in the temperature ranges given below. An elevated base material temperature leads to a reduction of the design bond resistance.

Temperature range	Base material temperature	Max. long term base material temperature	Max. short term base material temperature
Temperature range I	0 °C to + 40 °C	+ 24 °C	+ 40 °C

Max. short term base material temperature

Short term elevated base material temperatures are those that occur over brief intervals, e.g. as a result of diurnal cycling.

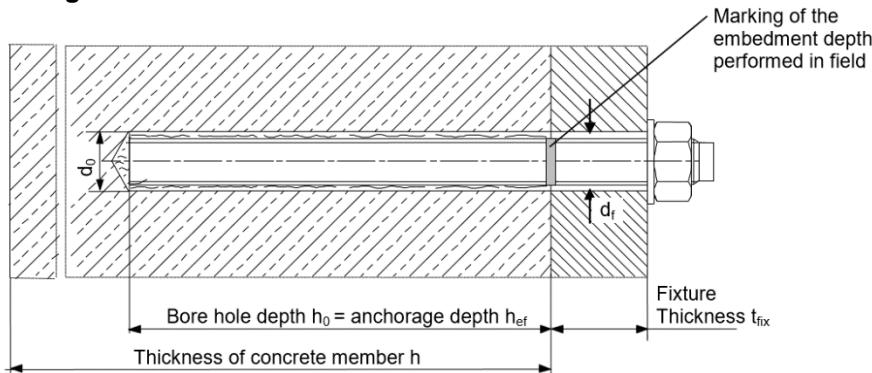

Max. long term base material temperature

Long term elevated base material temperatures are roughly constant over significant periods of time.

Working time and curing time

Temperature of the base material	Maximum working time t_{gel}	Minimum curing time t_{cure}
0 °C	10 min	4 h
0 °C < $T_{BM} \leq 5$ °C	10 min	2.5 h
5 °C < $T_{BM} \leq 10$ °C	8 min	1.5 h
10 °C < $T_{BM} \leq 20$ °C	5 min	45 min
20°C < $T_{BM} \leq 30$ °C	3 min	30 min
30 °C < $T_{BM} \leq 40$ °C	2 min	20 min

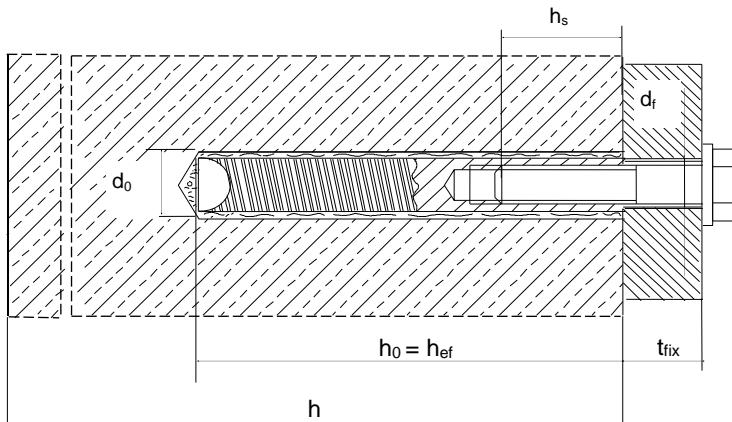

Setting details HIT-V / HAS / Rebar

HIT-SC

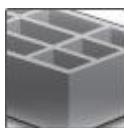

Benefits

- Chemical injection fastening for all type of base materials, hollow and solid:
- Clay bricks, sand-lime bricks, normal and light weight concrete blocks, aerated light weight concrete, natural stones
- Two component hybrid mortar
- Rapid curing
- Suitable for overhead fastenings
- Versatile and convenient handling
- Flexible setting depth and fastening thickness- Small edge distance and anchor spacing
- Small edge distance and anchor spacing
- Mortar filling control with HIT-SC sleeves

Corrosion
resistance

Static and quasi-static loading (for a single anchor)

All data in this section applies to

- Load values valid for holes drilled with TE rotary hammers in hammering mode.
- Correct anchor setting (see instruction for use, setting details)
- Steel quality of fastening elements: see data below
- Steel quality for screws for HIT-IC and HIS-N: min. grade 5.8 / IS-RN: A4-70
- Threaded rods of appropriate size (diameter and length) and a minimum steel quality of 5.6 can be used
- Base material temperature during installation and curing must be between 0°C through +40°C
(Exception: solid clay bricks (e.g. Mz12): +5°C till +40°C)

Recommended loads F_{rec} ^{b)} for pull-out failure in [kN]

Anchor size	HAS / HAS-E / HIT-V			HIT-IC		
	M8	M10	M12	M8	M10	M12
Solid Masonry						
Solid clay brick						
Mz12/2,0 DIN 105/ EN 771-1 f_b a) ≥ 29 N/mm ²	Setting depth [mm]	80	80	80	80	80
	F_{rec} [kN]	0.9	1.5	1.5	0.9	1.5
Hollow Masonry						
Hlz 12 DIN 105/ EN 771-1 f_b a) ≥ 12 N/mm ²	Sieve Sleeve HIT-SC	16x...	16x...	18x... 22x...	16x...	18x... 22x...
	Setting depth [mm]	80	80	80	80	80
	F_{rec} [kN]	0.8	0.8	0.8	0.8	0.8

a) f_b = brick strength

b) The data provided in the table is intended for product comparison only and not suitable for the complete design of an anchorage

Due to the wide variety of bricks site tests have to be performed for determination of load values for all applications outside of the above mentioned base materials and / or setting conditions.

Setting instructions

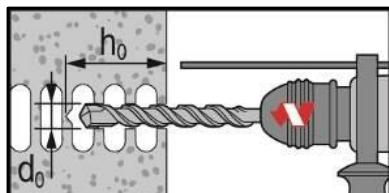

*For detailed information on installation see instruction for use given with the package of the product.

Safety regulations.

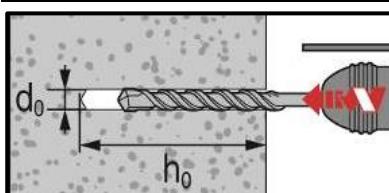

Review the Material Safety Data Sheet (MSDS) before use for proper and safe handling! Wear well-fitting protective goggles and protective gloves when working with Hilti HIT-HY 10.

Drilling

In hollow bricks: rotary mode

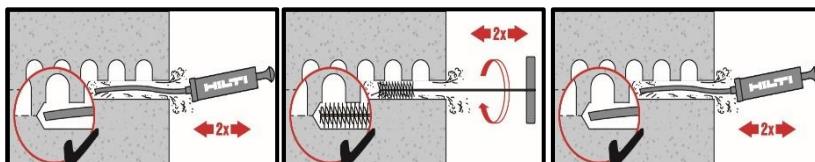

Drill hole to the required embedment depth with a hammer drill set in rotation mode using an appropriately sized carbide drill bit.

In solid bricks: hammer mode

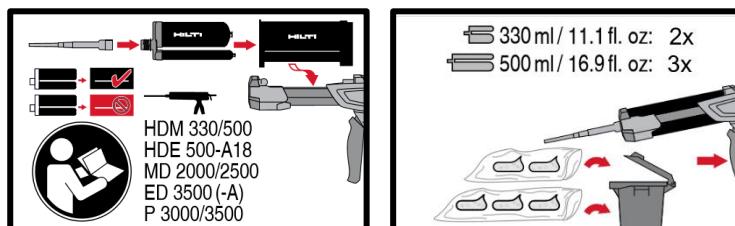

Drill hole to the required embedment depth with a hammer drill set in hammer mode using an appropriately sized carbide drill bit.

Cleaning

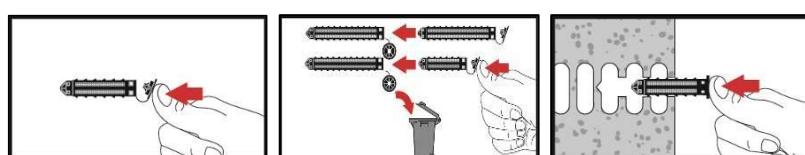

Manual cleaning (MC)

Injection system

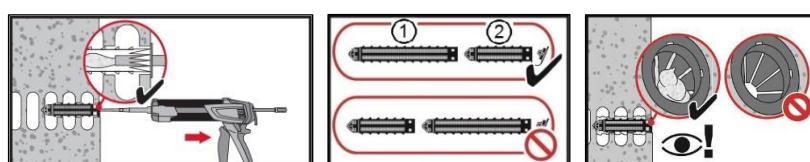

Injection system preparation.

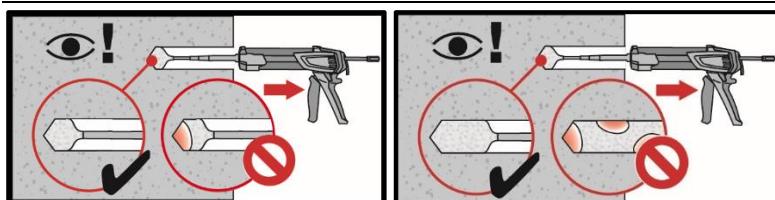

Injection system: hollow bricks

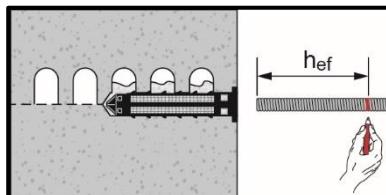

Injection preparation in masonry with holes or voids: installation with sieve sleeve HIT-SC

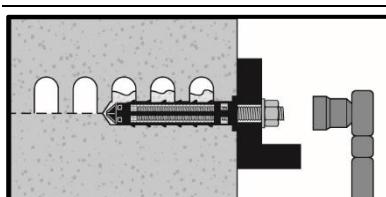

Installation with sieve sleeve HIT-SC

Injection system: solid bricks

Injection method for drill hole depth
 $h_{ef} \leq 250$ mm.

Setting the element

Presetting element, observe working time "t_{work}",

Loading the anchor: After required curing time t_{cure} the anchor can be loaded.
